

Increasing Clinical Trial Efficiency and Compliance

eTMF Connect helps Illingworth Research streamline clinical operations and adding value to their growing CRO services

October 17th, 2017

Illingworth Research Group (Illingworth) is pleased to be announcing the selection of Montrium and their Electronic Trial Master File (eTMF) Connect solution to further streamline global clinical operations and centralise collaboration with sponsors and sites. eTMF Connect, is a cloud-based electronic trial master file solution, which could become a powerful tool to enhance clinical trials management.

Illingworth has chosen eTMF Connect due to the software's cloud capabilities and the ability to offer an excellent platform for collaboration. We anticipate that we, and sponsors, will benefit from this robust and powerful eTMF platform; streamlining the management of essential clinical trial documents, providing clinical sites - as well as sponsors - with a consistent interface for efficient and effective collaboration.

"eTMF Connect changes how our sponsors and partners work together by providing fast, direct access to essential TMF content and data," said Melanie Haisley, Vice President of Clinical Operations at Illingworth. "With eTMF Connect we can now ensure our clinical projects and TMFs are managed with greater accessibility and efficiency by allowing our sponsors and trial partners to centrally access and collaborate on TMF content in real-time.

Illingworth, aims to embrace new technology where possible and we believe this software has the potential to assist sponsors in controlling trial timelines and minimise costs in the long-term. eTMF cloud deployment also supports rapid implementation, allowing Illingworth and their partners to realize the benefits of eTMF Connect much faster than traditional enterprise systems.

"Illingworth joins a long list of leading life sciences organizations who are centralising clinical operations and increasing their clinical trial efficiency with eTMF Connect," said Oliver Pearce, Commercialization Manager at Montrium. "Over the past 12 months, Montrium has seen incredible user growth with our cloud-based eTMF Connect product, as we continue to deploy dynamic, powerful, and intuitive content management solutions at a fraction of the time and cost of traditional enterprise systems."

eTMF is an exciting new development within clinical trials which we believe may revolutionize trials. We anticipate using both traditional paper and eTMF approaches for the immediate future, depending upon client requirements, but are excited by the potential impact offered by eTMF Connect.

About Illingworth Research Group: Illingworth is a well-established UK-based full-service Clinical Research Organisation (CRO) offering tailored clinical research management solutions to our clients including a specialist off-site research nursing service, visits can be conducted in the home, school or workplace.
